SOCIAL ECOLOGICAL SYSTEMS CURRENT PRACTICES ARCHIVE (SES-CPA)

The SES-CPA is an online archive for SES researchers to share and find frameworks, metadata, discoveries, and key personnel in SES science teams. Project managers can upload the stories of why projects were initiated, what methods were used, what was discovered, and where public and published results are available.

In order for SES science to advance, practitioners need common frames of reference to generate and share knowledge. Sharing knowledge of empirical and theoretical SES research allows researchers and groups to review and analyze data and metadata across multiple dimensions of space, time, and organizational level.

As researchers input data into the SES-CPA the dialog will contribute to understanding of complex real-world issues and aid the development of future projects in SES science. The archive can be accessed at www.sescpa.net.
