Place on a dish to catch juices. Cook your turkey immediately. Do not refreeze or refrigerate your turkey after thawing in the microwave oven. Remove the giblets from the turkey cavities after thawing. Cook separately.

FROZEN PRE-STUFFED TURKEYS

USDA recommends only buying frozen pre-stuffed turkeys that display the USDA or State mark of inspection on the packaging. These turkeys are safe because they have been processed under controlled conditions. **DO NOT THAW** before cooking. Cook from the frozen state. Follow package directions for proper handling and cooking. Allow 1 ¼ lbs. of turkey per person.

****** FOOD SAFETY TIP: WASH HANDS, UTENSILS, SINK AND ANYTHING ELSE THAT HAS COME IN CONTACT WITH RAW TURKEY BEFORE HANDLING OTHER FOODS.**

ROASTING YOUR TURKEY

Set your oven temperature to no lower than 325° F. For optimum safety, stuffing a turkey is not recommended. **It is recommended that you cook your stuffing outside the bird.** Use a food thermometer to check the internal temperature of the stuffing, it must reach a minimum internal temperature of 165° F. If you choose to stuff your turkey, the ingredients can be prepared ahead of time; however, keep wet and dry ingredients separate. Mix ingredients just before stuffing. Fill the cavity loosely. Cook the turkey immediately.

A whole turkey is safe when cooked to a minimum internal temperature of 165° F. With a thermometer, check the innermost part of the thigh and thickest part of the breast. If your turkey has a “pop-up” temperature indicator, it is recommended that you also check the internal temperature of the turkey in the innermost part of the thigh and thickest part of the breast. For quality, let the turkey stand 20 minutes before carving.
